A Few Basic Photography Tips for Beginners:

- If you already have a camera, learn to use the camera you have! Aside from the user manual, YouTube and Google are your friends
 - Cameras have a lot of settings, so learn which basic settings are the ones you actually need.
- Composition tips:
 - When looking through the viewfinder, try to frame your subject so that there isn't a ton of wasted space. If you need to zoom in a lot to do this, try moving closer instead to avoid blurriness.
 - Don't be afraid to have your subjects be slightly off center if it means the picture is more aesthetically pleasing.
- Lighting:
 - If you're taking a picture of a person, don't have them stand in front of a window. If you're outside, try to stand in a place where the sun is not directly behind the subject if possible.
- Be prepared:
 - Always have an extra battery that's charged
 - If you can, keep an extra memory card handy in case there is an issue with the one you have.
- Practice and have fun!
